

## New Dual Function Filling Line from Filling Solutions Ltd

The new dual function filling line from Filling Solutions is designed to **both**

- **Fill containers multi on pallet**
- **Automatically fill on conveyor**

At the front the Filling Machine is the standard StrongArm capable of filling almost all container types onto pallet, however swing the arm to the back of the machine and the it becomes a fully automatic container filler. Simply load the containers onto the in feed conveyor and the machine does the rest. The containers are fed under the lance and filled automatically weighed and filled before being ejected down the out feed conveyor.

This machine combines the advantages of both automatic on conveyor filling and on pallet filling which would normally have needed two separate machines. Although the machine illustrated utilises weigh scale metering, the machine can also use flow or volumetric along with many of the other normal StrongArm options (see over)

**Designers and Manufacturers of Automated Filling and Decanting Systems for Liquids and Semi-Solids**

## Automated on Conveyor and On Pallet filling from Filling Solutions Ltd

- Open Pale and bung hole containers
- Container sizes from 10 litres up to Road Tanker
- ATEX and Safe areas
- Bottom, Top and above lid Fill
- All stainless construction
- All metering systems; Gravimetric, Volumetric, Flow
- Automated conveyor lines incorporating
  - ◆ Denesting, lidders and lid press units
  - ◆ Auto gating
  - ◆ Accumulation
  - ◆ From small 10 litre containers up to full pallet conveyors
- ◆ Fully Automated Filling Solution
- ◆ Easy Installation
- ◆ Low Maintenance
- ◆ Large Operating Envelope
